Brief Description of Human Factors Pre-Market Review Process

The Human Factors Premarket Evaluation Team serves as consultants on the multi-disciplinary review team of various premarket submissions in CDRH and in other Centers within FDA. The team is responsible for evaluating use-related risk analyses, and human factors/usability information and validation study data included in the submission. The recommendations are reviewed and incorporated in FDA letters to the device manufacturers.

The team responds to device manufacturers' requests for advice on how best to conduct human factors evaluation and testing. The team works with manufacturers to resolve human factors deficiencies contained in premarket submissions via teleconference or face to face meeting.

HFE/UE Validation Report Contained in a Premarket Application or Submission

A Human Factors Engineering or Usability Engineering (HFE/UE) report included in a premarket submission should provide information pertaining to device use safety and effectiveness in summary form. The report should discuss the safety-related HFE/UE considerations, issues, processes, resolutions, and conclusions. The level of detail of documentation submitted should be sufficient to describe your identification, evaluation, and final assessment of all serious use-related hazards for the device. To facilitate FDA review, materials used directly in the HF/UE process, including portions of risk analyses focusing on user interactions with the device and specific risk analysis processes, results and conclusions should be included in the HFE/UE report. A recommended structure for the HFE/UE report, which will support efficient FDA review of these materials, is listed and described in the table below.

Support for Appropriate Application of Human Factors Methods to Medical Device Design

Quality System / Design Control Regulations

Medical device manufacturers are required to comply with the Quality System regulation, 21 CFR Part 820 (<http://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?CFRPart=820&showFR=1>). In particular, Section 30, Design Controls (<http://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?FR=820.30>), includes requirements relevant to human factors.

- Quality System (QS) Regulation/Medical Device Good Manufacturing Practices (/quality-systems-regulation)
- Human Factors Implications of New GMP Rule; Overall Requirements of the New Quality System Regulation (/medical-devices/human-factors-medical-devices/human-factors-implications-new-gmp-rule-overall-requirements-new-quality-system-regulation)
- Design Control Guidance For Medical Device Manufacturers (/media/116573/download)
- Quality System Information for Certain Premarket Application Reviews; Guidance for Industry and FDA Staff (/media/71083/download)

FDA-Recognized Standards on Human Factors

FDA has officially recognized (<http://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfStandards/search.cfm>) device-specific and general consensus standards published by national and international standards bodies. Standards recognized by FDA related to human factors and application of HFE/UE to medical devices are listed below:

| Standard | Title | Main Purpose |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| AAMI/ANSI HE75:2009 | <i>Human Factors Engineering – Design of Medical Devices</i> | Comprehensive reference that includes general principles, management of use error risk, design elements, integrated solutions |
| ANSI/AAMI/IEC 62366-1:2015 | <i>Medical devices – Part 1: Application of usability engineering to medical devices</i> | HFE/UE process applied to all applying HF/usability to medical device design, with consideration of risk management |
| ANSI/AAMI/ISO 14971:2007/(R)2010 | <i>Medical Devices – Application of risk management to medical devices</i> | Risk management process for medical devices |
| IEC 60601-1-6:2010 | <i>Medical electrical equipment – Part 1-6: General requirements for basic safety and essential performance – Collateral standard: Usability</i> | Provides a bridge between IEC 60601-1 and ANSI/AAMI/IEC 62366 |
| IEC 60601-1-8 Edition 2.1 2012-11 | <i>Medical electrical equipment – Part 1-8: General requirements for basic safety and essential performance – Collateral Standard: General requirements, tests and guidance for alarm systems in medical electrical equipment and medical electrical systems</i> | Design standard for alarm systems in medical electrical equipment and systems |
| IEC 60601-1-11:2010 | <i>Medical electrical equipment – Part 1-11: General requirements for basic safety and essential performance – Collateral Standard: Requirements for medical electrical equipment and medical electrical systems used in the home healthcare environment</i> | Requirements for medical electrical equipment used in non-clinical environments, including issues involving medical device use by lay users |

FDA - Guidance Documents Related to Human Factors

FDA has developed several guidance documents to support device manufacturers to apply appropriate human factors methods in the design of their products. These include:

- [Applying Human Factors and Usability Engineering to Medical Devices \(/media/80481/download\)](/media/80481/download).
- [List of Highest Priorities Devices for Human Factor Review \(draft guidance\) \(/media/95804/download\)](/media/95804/download).
- [Guidance for the Content of Premarket Submissions for Software Contained in Medical Devices \(/media/73065/download\)](/media/73065/download).
- [Guidance for Industry and FDA Staff - Total Product Life Cycle: Infusion Pump - Premarket Notification \[510\(k\)\] Submissions \(/media/78369/download\)](/media/78369/download).
- [Reprocessing Medical Devices in Health Care Settings: Validation Methods and Labeling \(/media/80265/download\)](/media/80265/download).

FDA - Guidance and Information on Medical Device Labeling

- [Guidance on Medical Device Patient Labeling; Final Guidance for Industry and FDA Reviewers \(/media/71030/download\)](/media/71030/download).
- [Labeling requirements from Device Advice \(http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/Overview/DeviceLabeling/default.htm\)](http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/Overview/DeviceLabeling/default.htm).
