Contents

Chapter 1: Introduction and History 1
By Max Sherman

Chapter 2: Regulatory Requirements for Design & Process Validation 5
By Robert V. Packard & Leo Lagrotte

Chapter 3: Risk-Based Verification and Validation 13
By John E. Lincoln

Chapter 4: The Need for Test Method Validation 27
By Dylan Stover

Chapter 5: Test Method Validation for Medical Devices and Packaging 29
By Brian K. Farison

Chapter 6: Design of Experiments 43
By Anthony Carra

Chapter 7: Sterilization Validation Principles 61
By Gerry O'Dell

Chapter 8: Six Sigma Concepts in Validation Studies for Medical Device Packaging 75
By Brian K. Farison and Rod Patch

Chapter 9: Medical Packaging Validation 93
By David DiVaccaro

Chapter 10: Cleaning Validations of Medical Products 99
By Steven G. Richter, PhD

Chapter 11: Software Validation for Life Sciences 107
By Wes Bloemker

Chapter 12: FDA Unique Device Identification Verification and Validation 131
By Jonathan C. Bretz, OT/L, MBA, RAC

Chapter 13: Equipment Validation 145
By John E. Lincoln

Chapter 14: Sample Sizes for Verification and Validation 157
By Steven Walfish

Chapter 15: Verification and Validation in Medical Device Computational Modeling and Simulation 167
By Danny L. Levine, PhD, PE

Chapter 16: Additive (3D Printing) Manufacturing 179
By John E. Lincoln

Chapter 17: Cybersecurity and Data Integrity 191
By John E. Lincoln

Chapter 18: Validating the Medical Device Laser Welding Process 203
By David W. Steinmeier and Lisa Schaller

Chapter 19: Start-up of Cleanrooms, Initially and After a Worst-Case Event 211
By Jim Polarine and Beth Kroeger

Appendix A: Quality Management Systems - Process Validation Guidance 217

Appendix B: Design Control Guidance for Medical Device Manufacturers 253

Appendix C: Reporting of Computational Modeling Studies in Medical Device Submissions 307

Appendix D: Technical Considerations for Additive Manufactured Devices 355

Appendix E: Data Integrity and Compliance With CGMP 383

Index 397
